

## profile

Caroline has considerable experience of landscape and visual assessment and design, particularly for windfarms, but also for roads, woodland, hydro-electric schemes, housing, telecom masts, powerlines, aquaculture, quarries and landfill. Caroline has undertaken a great deal of strategic work, directly influencing Scottish national policy on landscape issues. She has also completed a number of research projects and been solely responsible for writing reports and guidelines as well as providing training and presentations to a range of audiences, including Scottish Government and the US National Wind Coordinating Committee. She is currently undertaking PhD research at Edinburgh College of Art - University of Edinburgh on the perception of scale in the landscape with specific reference to wind turbines.

## project experience

- Landscape and Visual Impact Assessment and Environmental Impact Assessment
- Windfarm design and assessment
